

https://sls.console.aliyun.com/lognext/profile

迁移方法:

https://confluence.alo7.cn/pages/viewpage.action?pageId=56387992

原理 通过sls过滤 pod的evn或者是自带的一些namespace做筛选,可以实现不同业务不同的logstore的要求,各种筛选条件是基于ES分词的

业界标准:利用x-trace-id / x-request-id 实现单次操作的整个业务的跟踪。 支持消息,redis,异步,sql等

接入文档看: https://confluence.alo7.cn/pages/viewpage.action?pageId=63603809 有opentrace的和agent两种接入方式

能找到和这次执行的所有操作日志

https://sls.console.aliyun.com/lognext/trace

https://sls.console.aliyun.com/lognext/project/k8s-logc70e80529ee1043a1a1d317270b73ea69/logsearch/default-all-log

ingress的日志格式:

https://kubernetes.github.io/ingress-nginx/user-guide/nginx-configuration/log-format/

Prometheus

```
☐ General

JVM (Micrometer)

Spring-Boot-Statistics
```

```
@Bean
MeterRegistryCustomizer<MeterRegistry> metricsCommonTags() {
  return registry -> registry.config().commonTags("application", "MYAPPNAME");
}
```

https://grafana.com/grafana/dashboards/6756

rds自带: mysql的监控和告警: 主要看CPU、内存、连接数: 运维 https://rdsnext.console.aliyun.com/detail/rm-2zeot25a40y 系统性的 monitorAlarm?region=cn-beijing

Mysql接入到prometheus:(配置监控需要用户名和密码,没有自我发现机制) https://help.aliyun.com/document_detail/140605.html? spm=a2c4g.11186623.0.0.74007285ykXDaJ

Redis 自带监控和告警:

https://kvstore.console.aliyun.com/?

spm=5176.12818093.favorite.dkvstore.5adc16d0S0Ybaa#/detail/r-2zeszyv6ux9fhrlsqn/Normal/VPC/redis.master.small.default/redisHistory?regionId=cn-beijing

Redis接入Prometheus: (对CName支持不是特别好,变了不好整)

https://help.aliyun.com/document_detail/140606.html?

spm=a2c4g.11186623.0.0.74007285ykXDaJ

Rabbitmq自带监控与告警:

https://amqp.console.aliyun.com/region/cn-beijing/instance/amqp-cn-tl32b9jza01j/monitoring

Prometheus里面的组件监控加上去即可: (目前对prometheus支持不是很好, 阿里迭代中) https://prometheus.console.aliyun.com/?promtype=ManagedKubernetes/#/promDetail/cn-beijing/c1fd194ba85b8408b836fdbd7b2e3845b/exporters

Prometheus

自定义的应该非常少才对,除了这些应该很少需要我们自己去自建dashboard的

监控

Arms

只需要加这两行就可以开启

```
armsPilotAutoEnable: "on"
armsPilotCreateAppName: {{ template "helm.fullname" . }}
```

查调用栈 JVM分析不

(boolean autoCommitFlag) Tags

Spring Boot Admin

http://foundation-sba.production.saybot.net/#/instances/d216906d89c4/env

目前地址比较多,要不要统一?

维度:

含指标,能反映问题的告警指标

度:系统组件

告警最重要的几个指标:

- 1. Fatal日志数
- 2. Error日志数
- 3. Http:5**数量
- 4. Http:P95响应时间告警
- 5. 内存溢出告警
- 6. Health检查->监控宝

https://sls.console.aliyun.com/lognext/project/k8s-logc70e80529ee1043a1a1d317270b73ea69/alertcenter? tab=alert_center&rule_filter=sls.app.sls_ack.error

https://cloudmonitor.console.aliyun.com/#/alarmservice/ bduct=amqp_instance&searchValue=regionId___cn-beijing,instanceId_

amqp-

https://prometheus.console.aliyun.com/?promtype=ManagedKubernetes/#/promDetail/ cn-beiiing/c70e80529ee1043a1a1d317270b73ea69/alarms

数据库和redis等系统组件同样需要加一些 告警

告警的改进空间?如何只关心自己的?

- 1. 建业务自己的告警 群,告警机器人,告警机器人;
- 2. 去promethous、redis、数据库、rabbitmq添加之定义指标监控,并且指定告警人
